Agenda

- **Properly configure Git**

- Advanced Git commands

- Customize Git with Git Hooks

Properly configure Git

1. Files

2. Merge/Diff Tool

3. ...

Files

There are four files where git config will search for configuration options

$(prefix)/etc/gitconfig
System-wide configuration file.

$XDG_CONFIG_HOME/git/config
Second user-specific configuration file.

~/.gitconfig
User-specific configuration file. Also called "global" configuration file.
